Subject: RE: Update from Sarah and James in Crossett

I assume we would change "Later this week, EPA will begin" to "Today EPA began"

Today EPA began placing air monitors to measure hydrogen sulfide emissions in Crossett, Arkansas. The project has been closely coordinated with city officials, Georgia-Pacific officials and community leaders in an effort to gather additional scientific information regarding possible hydrogen sulfide emission sources in the area. Georgia-Pacific agreed to allow 11 monitors to be located within their plant boundaries. City and community leaders agreed to the location of an additional nine monitoring locations within the community. A total of 20 air monitors will collect hydrogen sulfide samples. Each sample will be collected over two-week intervals for up to six months. When the project is completed, data results from the samples will be publicly available.

Subject: Update from Sarah and James in Crossett

Hi Stacey:

I just heard from Sarah and things are going smoothly and a lot faster than expected in Crossett. As of 11:45 this morning, they had installed all eleven monitoring stations on GP property with full cooperation from Georgia-Pacific staff. GP is going to collocate samples in each of our monitoring stations.

Sarah, James and the contractors are going to try to install the remaining nine community monitoring stations this afternoon so ERG can leave a day earlier than planned and save some of our contract funds. Sarah and James will have to stay until Friday morning to install the first round of monitoring tubes since our plan is to harvest samples each Friday for the next 6 months.

Let me know if you have any questions.

Thanks,
Margaret
